EDUCATION

University of California, San Diego

Sep. 2023 – Expected Jun. 2027

Bachelor of Science in Computer Science & Engineering | **GPA: 3.2**

La Jolla, CA

Relevant Coursework: Design & Analysis of Algorithms, Operating Systems, Database Systems, Parallel Computing, Computer Networks, Computer Security, Data Structures, Large Codebases, Online Database Analytics & Applications

TECHNICAL SKILLS

Languages: Python, Java, C/C++, C#, JavaScript, TypeScript, SQL, Swift, HTML/CSS

Frameworks & Libraries: FastAPI, Flask, React, Node.js, Express, SwiftUI, SQLAlchemy, Pydantic, Socket.IO, scikit-learn, NumPy, REST APIs

Infrastructure & Tools: Docker, AWS (S3, IAM, EC2), DigitalOcean, PostgreSQL, SQL Server, Neon, SQLite, Nginx, Linux, Git, GitHub Actions, CI/CD, pytest, Jira, Microsoft Teams, Claude Code

EXPERIENCE

Immo-Office

Sep. 2026 – Present

Software Engineering Intern

Remote

- Migrated legacy **.NET**, **C#**, and **SQL Server** applications to **Python**, **FastAPI**, **PostgreSQL**, and **React**, making the codebase easier to maintain and extend.
- Built and maintained the migration's **regression testing suite**, validating each refactored service against legacy behavior to catch unintended changes before release.
- Improved internal workflow efficiency by **20%** and automated repetitive manual processes using **AI agents**.

Association for Computing Machinery (ACM)

May 2025 – Present

Developer – AI Competitions Team

San Diego, CA

- Reduced tournament evaluation time from **11 hours** to **20 minutes** by designing a parallelized game orchestration using **Python** multiprocessing, distributing **79,600** game evaluations across **32 worker processes**.
- Containerized ML competition servers with **Docker** and **Flask**, enabling language-agnostic bot submissions from **200+** entries at events sponsored by **Qualcomm**, **Cursor**, and **Voiskey**; isolated game state and enforced deterministic turn ordering to prevent race conditions.

Mirron

Jan. 2026 – Mar. 2026

Software Engineering Intern

Remote

- Deployed **AWS** infrastructure (S3, Control Tower, IAM) to configure **Electronic Lab Notebooks** for biologists studying gene activation via fluorescence imaging.
- Provisioned high-compute **EC2** workstations and authorization policies within one-week **Agile sprints**, expanding capacity for data-intensive research.

PROJECTS

The Fray | *Python, FastAPI, PostgreSQL, scikit-learn, React, Axios*

May 2025 – Apr. 2026

Personalized News Recommendation App – thefraynews.com

- Improved article recommendation accuracy by **~35%** by implementing a **KNN** collaborative filtering model with **scikit-learn**, training on interaction vectors (views, likes/dislikes, saves) to personalize feeds.
- Developed a **REST API** with **FastAPI** and a normalized **PostgreSQL** schema (**SQLAlchemy**), secured with **JWT** auth and **bcrypt** hashing; deployed via **GitHub Actions CI/CD (pytest)** to a **Linux VPS** behind **Nginx**, serving **100+ concurrent users**.

Cash Out Poker & Hemma | *Swift, FastAPI, CDN, PostgreSQL*

Jun. 2026 – Aug. 2026

Shipped iOS Applications – cashoutpoker.net | hemmalive.com

- Launched **Cash Out Poker**, a home-game bookkeeping app serving **500+ users**, pairing a **SwiftUI** client with a **FastAPI** backend on **Neon** serverless **PostgreSQL** to track buy-ins, payouts, and settlements.
- Developed **Hemma**, a widget-based social platform with **200+ users**, serving photos from **DigitalOcean Spaces** behind a **CDN**; built shared **Swift** networking and offline-tolerant state layers for both apps and deployed both backends on **DigitalOcean**.
